

Waste Challenge Title

live with people you vibe

Introduction

The cities of tomorrow will consist of less individual ownership and have to offer a lot of shared assets, including lifetime.

Problem Definition:

The future of living is already there - living with roommates, connecting with other people in shared apartments in your house & city, there are endless possibilities! But it is a challenge to find the right people to live with.

What is the waste challenge?

One of the key components of saving resources will be shared living space - which is already consuming way fewer resources than any other way of living - but there is still a lot to improve.

What is crucial here, is the social aspect. All the other concepts aren't working, all creatives and architects will fail if we don't create a social network enabling the shared economy of tomorrow.

- How will social sharing of living space save even more resources
- What is the vibe between people and how do we help them find each other
- Think about a community of shared apartments - how can they save resources together

Who is behind this challenge?

We are heyroom - a startup / digital platform that connects people who are willing to share their living space. www.heyroom.app

Topic domain of challenge: Cities, Energy or Consumption

Cities, Consumption, Energy

Desired Impact of Challenge:

To create change, we need to find a way to bring people with the same vibe together and bring joy into every individual's life, to not waste their rarest resource: live time. #nozweckwg

Skills needed/recommended

The module is open to everyone]

Relevant considerations for the challenge / theme:

We are looking forward to stay in regular contact during this challenge and having some exciting discussions,
