

Digitainability: Sustainable Smart Cities 2022

"The Sustainable Act"

ABOUT

A project to inform on how to reduce CO2 emissions in rural areas

THE CHALLENGE

"Find engaging ways to inform people about possible digital ways to reduce CO2 emissions on a municipal level. Focus especially on the different political options and their consequences for implementation."

by Bayerische Landeszentrale für politische Bildungsarbeit

THE IDEA

A school play to educate on how to reduce CO2 emissions in digital ways. With a "Toolkit", teachers are guided through the process and can cooperatively stage the play with the students

KEY LEARNINGS

- Non-digital methods can still be the most effective ones
- Using individual skills and strengths in a team to develop a successful project
- How to pitch an idea creatively

WHAT'S NEXT?

As next steps, the goal would be starting pilot projects in "Realschule" through the connections of the Bayerische Landeszentrale für politische Bildungsarbeit, to then reach other schools and partners
